

# Cordless DECT phone wireless radiation can seriously disrupt heartbeat

DECT – Digital Enhanced **Cordless** Telecommunications  
Cordless means *wireless* – it sends calls and data through the air and walls via radio-frequency radiation

Results of a double-blind study conducted by Dr. Jeff Marrongelle. It is presented by Magda Havas, Ph.D., 13:14 minutes into Talk 2 of *EMF Medical Conference 2021* (see all talks online). Of special concern in the talk is the impact of wireless radiation on the **heart-health** of our young. Note: heartbeat arrhythmias can be occurring without being noticed!

Neither the person tested nor the researcher knew if the DECT phone was radiating. "Sham" means that the phone is plugged in but not actually powered. The heartbeat of subject B is erratic and quicker with the phone powered. But why is subject A *non*-reactive? Research is showing that the negative health effects of wireless radiations depend on whether the pulsed human-made frequencies unlock the frequency-sensitive mechanisms that regulate things like heartbeat or hormone-production; and the frequencies and intensities used by these biological mechanisms can vary person-to-person. The sheer rise in the number of pacemaker-device implants and heart medications is a *wake-up call* to this invisible stressor that we are creating.

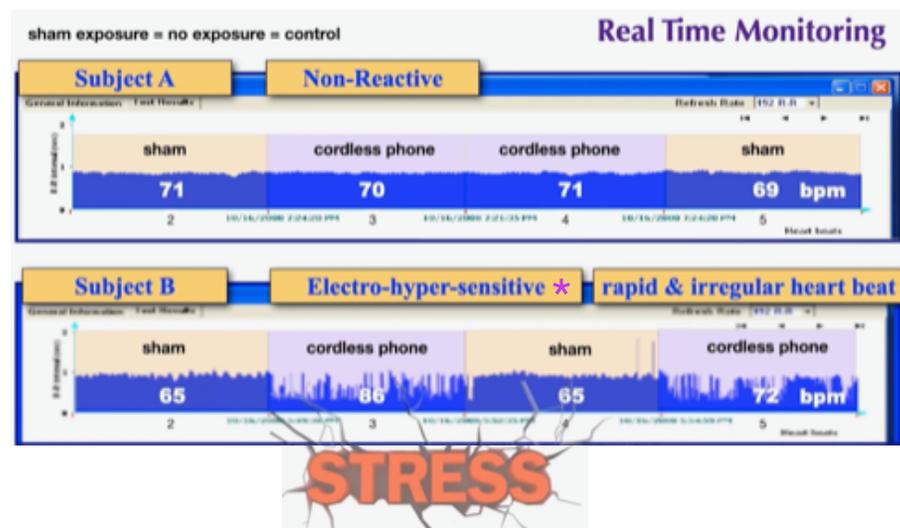

\* Dr. Paul Héroux reported that a professional group in France has stated that "they don't agree with designating electrohypersensitivity as a pathology and electrohypersensitive people as sick people." He totally agrees and said, "it is not *you* who is sick: it is the environment that is sick; and it is made sick by an industry that is either non-caring or ignorant." Dr. Héroux is a professor at McGill University, teaching on the Health Effects of Electromagnetism. (His comment is near the end of the YouTube from the **World EHS Day Massachusetts 2023**: [https://www.youtube.com/watch?v=\\_LBSnX-MPDc](https://www.youtube.com/watch?v=_LBSnX-MPDc).)

**Electromagnetic Radiation Syndrome, EMRS**, is now the proper name for this condition. We are generating a sea of radiations that is pathological. It is time to come to our senses, redesign our communications devices and keep antennas off as much as possible.
